BULBS BY THE DOZEN

We send DIVIDED FIELD GROWN ROOTS (or bulbs) only. NO PLANTS (or slips) of any kind sent out.

Orders for bulbs will be booked for spring delivery any time in the year.

Unless otherwise specified, if we are sold out of any variety, we will substitute one of the same general class as to color, etc., which will be as good or better than ordered.

Size of Bulbs. Some varieties of dahlias always produce very small bulbs (or tubers), while other varieties make large ones. So do not consider small bulbs as worthless, for they are equally as good as large ones.

GUARANTEE—We Guarantee Every Bulb We Sell. The utmost care is always exercised in selecting every bulb we send out, and every one is believed to have at least one good sprouting eye that will produce a good plant under proper care. In all cases bulbs to be replaced must be returned.

We Guarantee All Bulbs to be true to name and sure to grow at the time they are sent out, but we cannot guarantee bulbs to grow if kept in a dry place a long time before planting, or otherwise abused.

We will prepay carriage on all retail orders of \$2.00 and over accompanied by the cash for the full amount of the order.

Bulbs are shipped at owner's risk.

The best way to send money is registered letter, money order or express order.

DO NOT HESITATE to send small orders, they receive the same careful attention.

TERMS: Cash, invariably, in advance, except previously arranged.

Customers who are not personally known will be notified when to remit the amount of their bill.

Bulbs are shipped from April 1st to June 1st, unless specified.

Do not delay ordering until the time to plant as many varieties may be sold out before that time. Order early.

If Bulbs are received before it is convenient to plant them, they should be kept in a moist place until planted.

We use the utmost care to prevent errors in labelling and packing, but if an error does occur, kindly notify us, that it may be rectified immediately.

Send for special prices on large orders.

GENERAL CULTURAL DIRECTIONS

The dahlia unlike most flowers, is not particular as to soil and environment, but will succeed on almost any soil where anything else will grow. About the only soil where the dahlia will not succeed is a heavy sour, wet clay. But they prefer a medium light, sandy loam, not exceptionally rich, but yet well supplied with humus and in good mechanical condition.

Unlike some growers we do not recommend heavy applications of barnyard manure in the spring or at planting time. If the soil is very poor and needs fertilizer of this kind or is deficient in humus, it should be applied and worked in, in the fall.

We prefer planting in a reasonably good piece of ground and not apply any fertilizer other than a small amount of good, readily available chemical fertilizer at about the time of the second hoeing or about the time the first buds are forming and then no other unless the plants receive a check.

An open sunny location seems to favor them at all times, but they do very well in extremely shady places where the sun only touches them for a limited time each day. In such shaded places, however, the plants will make a much larger and more tender growth than out in the open and in some varieties the colorings will not be so intense.

Dahlias should be planted in this section about May 15th to June 15th, in rows about 3 feet apart and from 4 to 6 inches deep. After they have attained a height of about 8 to 10 inches, begin to train them according to the system preferred. Either on stakes, the branching system or in massed lots.

Perhaps for yards and for general purposes, the staking system is best and for this the stakes should be set at time of planting and the plants tied to these stakes as they grow, thus protecting them from winds and allowing freedom of passage from one plant to another when in bloom.

If the branching system is adopted, stakes will not be necessary, as after the plants have developed two sets of leaves, the top is pinched out which forces the plant to send out a branch at each leaf, thus making four branches instead of only the one main stalk and, consequently, gives a stockier plant with more flowers and a neater appearance.

A plant of this kind will not be easily blown down by the winds. This system however, makes blooming time about 2 weeks later.

If space is limited, the massing system may be adopted, in event of which bulbs should not be planted more than 1 to 2 feet apart, allowing the plants to form large masses supporting each other and giving a solid mass of flowers and foliage and avoiding the ugly, unnatural effect that numerous stakes invariably give.

To obtain the very largest and most perfect flowers in any system, only the best and strongest buds should be allowed to develop. The rest should be pinched off, allowing the plants to throw their full strength into developing the remaining ones into exhibition blooms.

Do not be afraid to cut your flowers. The more you cut the more they come. If you can't use them yourself give them to your neighbors and you will then be helping yourself at the same time you are giving them a great deal of pleasure.

Bulbs should be dug soon after the first heavy frost kills down the plants in the fall and immediately stored in a cool (not freezing) reasonably dry place.

Place in boxes, barrels, crates or on shelves, preferably upside down and do not cover with any material such as ashes, sand, dirt, leaves, etc. Material of this kind almost invariably holds too much moisture and causes the bulbs to decay. Do not store near furnace or other heat as they will dry and shrivel and become worthless.

In the spring, before planting time, take out the clumps and divide by cutting first in two parts and then separating as nearly as possible to one good root with one good strong eye. Never plant more than two roots in a single hill, as in this case you will get an immense number of stalks and a consequently large number of flowers which the roots will be unable to support and your flowers will be exceedingly small and imperfect.

These are only very general instructions as it is impossible to give any one fixed set of instructions to be followed by all, as soils, climate and seasons differ so. We hope, however, that we have given the prospective purchaser an idea of the principle of dahlia growing from which with the use of a little judgment, he will be able to obtain the great pleasure and satisfaction which only the dahlia grower knows, for surely there is no flower that will succeed on so wide a range of soils, that will adapt itself to so widely varying altitudes and climates and that will give such an abundance of bloom of **unlimited** color variations at so small an outlay of money and labor.

PEONY-FLOWERED DAHLIAS

This new type of Dahlia originated in Holland, and has become very popular. The flowers are very large, and resemble somewhat the semi-double peony in form. The petals are very peculiarly twisted and in-curved, and the flowers are produced on extra long stems, making them invaluable for cutting or garden decoration. We cannot recommend this new class of Dahlias too highly.
